Infrastructure Sharing Solutions

**Sharing 1 fibre
at the building basement terminal**

Short description of the solution

PRI product range:

- interface between Operator network // building private network
- sharing each subscriber fibre among several operators.

The deployment of the last miles represents huge investments.

This solution allows:

- sharing investments among several operators
- improving payback by proposing other operators a subscriber access offer
- convince buildings owners to deploy by showing compatibility with all services from all players.

Simple concept:

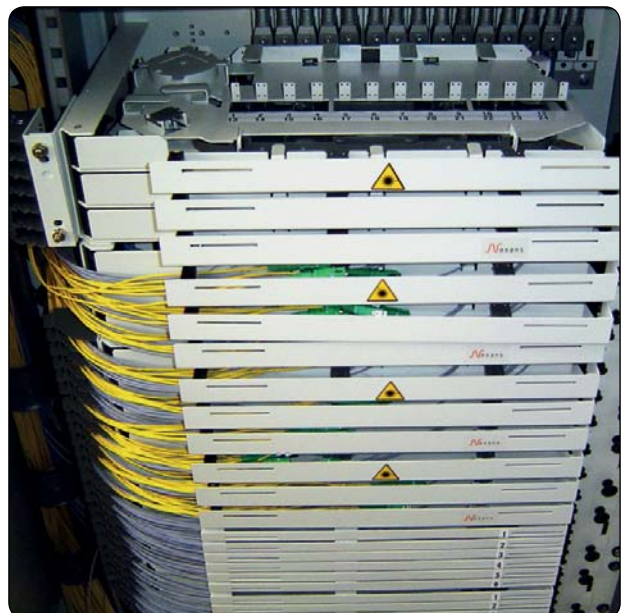

- on the private side, every single fibre connected to a potential subscriber is going to the rear part of a patch panel.
- on the operator side, one can choose which connector from which operator will be connected to the subscriber fibre, on the front side of the patch panel.

Fully compatible with PON or Point to Point architecture at the same time.

PRI 24

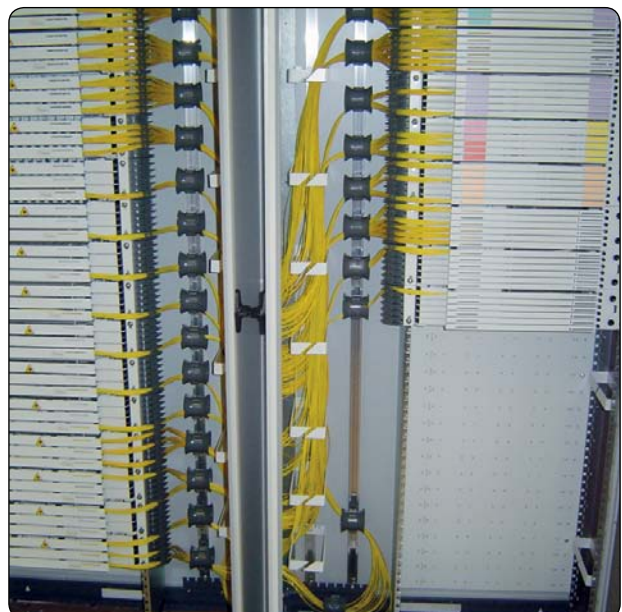

PRI 200

PRI 500

PRI 1000

Benefits

Wide range:

- indoor/outdoor
- wall box/cabinet/frame
- size by number of subscribers.

Modular concept:

- 1st operator invests in the box and its module
- other operators invest in their own modules, giving access to the subscribers.

Demarcation point between:

- the responsibilities of the operator
- and the owners of the building.

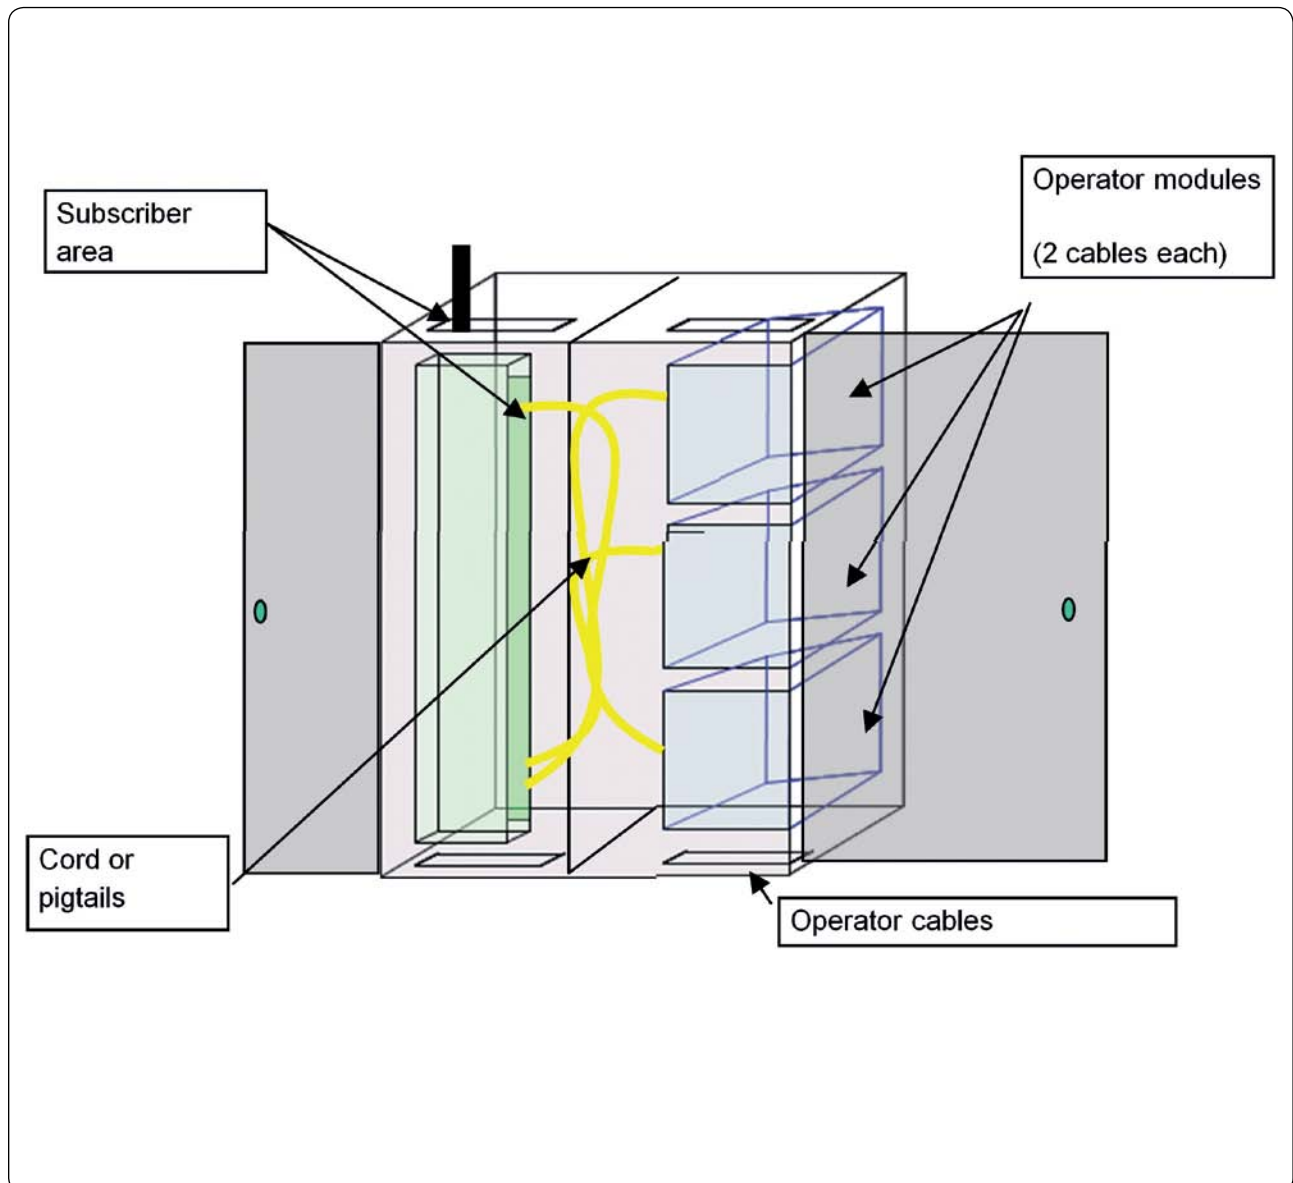

So this solution includes 2 different locked areas:

- the privative area installed at once and rarely re-accessed (maintenance only)
- the operator area for the subscriber connections or disconnections.

Can be provided pre-cabled

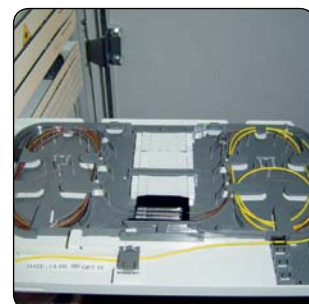

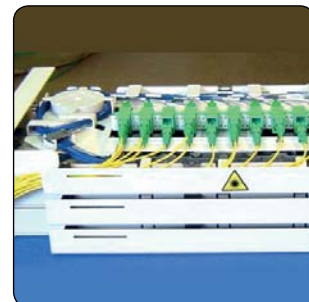

(preconnectorised vertical cable, splitter) for fast installation.

Scheme of the sharing
